

What is Nexus?

Nexus centralises processes throughout your business under a single pane of glass, enhancing visibility, productivity, and governance.

Older ERP systems confined functions to individual silos of information that obscured the bigger picture, were complex, expensive, and difficult to update.

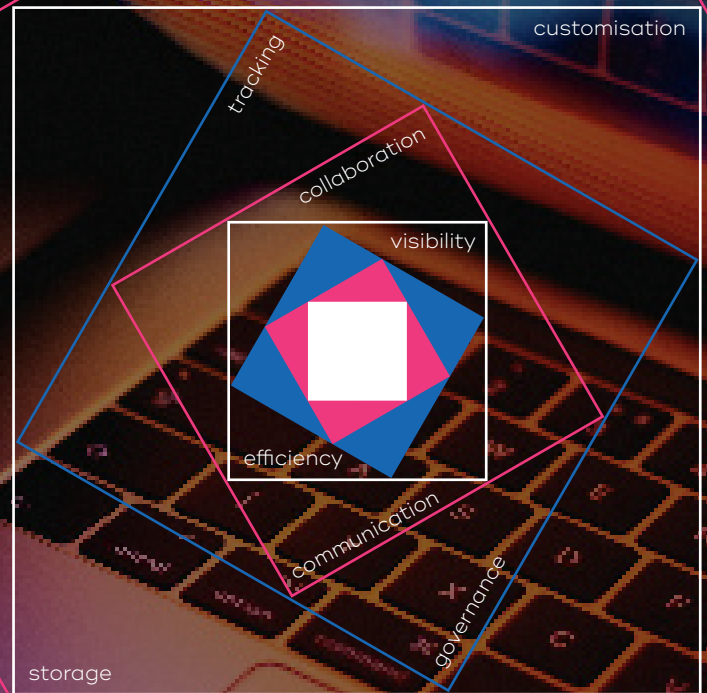

But that has changed.

Nexus effectively consolidates all aspects of the business so that you can see the big picture.

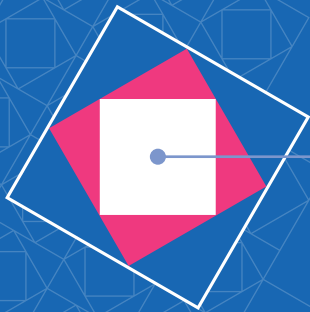

Nexus integrates, secures, and optimises processes, providing business-wide visibility for informed decision making, and improved efficiency, productivity and agility.

Designed with flexibility and extensibility in mind, Nexus allows for your business processes stay up to date.

From high-level metrics down to precise details, Nexus offers a unique, relevant and usable view of information about your business. Your company can leverage the Nexus toolset to operate within the familiarity of SYSPRO.

Collections

File Storage

Notifications

Flowcharts

Bulk Actions

How does it work?

Related transactions, files, & conversations are tagged into collections. Nexus makes it easy to control these collections and the data within.

Collections lay the foundations for a powerful suite of tools.

Notifications and flowcharts encourage effective collaboration and

information is always made available where and when it is needed.

Storage and SMS messaging extend the breadth of collections beyond the ERP.

How can it help me?

Visibility. Productivity. Collaboration. Flexibility.

Get dramatic results without a lengthy implementation – just plug & play.

Role-based customisation allows you to tailor Nexus to the needs of your organisation in a matter of minutes.

Powered by SYSPRO Business Objects, Nexus seamlessly integrates with your data whilst maintaining the integrity of your information.
